

Maximiliano Garcia

Interdisciplinary, versatile IT professional and experienced network administrator. I find interest in emerging technologies across dynamic work environments, actively communicating technical skills, and collaborative tools for business growth.

(479) 402-1707 | maxgarcia642@gmail.com | [linkedin.com/in/maximiliano-garcia642](https://www.linkedin.com/in/maximiliano-garcia642) | [maxgarcia642.github.io](https://github.com/maxgarcia642)

WORK EXPERIENCE

IT Services Network Support Technician <-- Asset Management Assistant *University of Arkansas, Fayetteville* | August 2025 – Present

- Promoted to **support campus-wide data networks**, delivering hands-on Layer 1–3 support, structured cabling, switch port activation, and VLAN assignment across academic and administrative buildings **serving 30K+ students, faculty, and staff**
- **Resolve 50+ network incidents and support tickets per week** in *TeamDynamix* coordinating with engineers, ITAM, Help Desk, and departmental IT to restore service, perform planned maintenance and upgrades, troubleshoot port flapping, dead drops, and wired/wireless connectivity faults, and monitor infrastructure to identify and escalate potential outages before user impact
- Support the **Access Layer Refresh Project** (campus wireless migration from *Aruba* to *Juniper Mist AI*), **surveying and mapping access points across 10+ buildings**, converted **floor plans to SVG for the shared database**, and executed the **AP decommissioning pipeline** for factory reset, CPsec allowlist purge, monitoring removal, while proposing a **USB barcode-scanning workflow**
- Contributed to the **ITAM Maturity & Data Security Centralization Project** through the **End-of-Life Surplus Roundup**, retrieving, disassembling, verifying, and tagging assets in Excel to meet state-mandated 90-day data sanitization requirement
- **Delivered 3,000+ procured assets** to campus departments using *Workday EIB* bulk transfers, processed EOL backlogs with secure data erasure (*Blancco* wiping, *Garner* degaussing), maintained chain-of-custody documentation, and flagged sensitive devices

IT Help Desk Support Intern *City of Fayetteville, AR* | March – May 2026

- Delivered **first-level IT support** across phone, walk-in, and ticket channels for staff spanning various municipal departments like **GIS**, resolving or escalating hardware, software, accounts, and network issues through *ManageEngine ServiceDesk Plus*
- Administered *Active Directory* user lifecycle tasks with password resets, account lockouts, loaner equipment computer objects, and managed physical access credentials in *LenelS2 NetBox*, including **full badge production workflows** on a printer
- Assisted network teams with computer **network equipment installation**, structured cabling, and **computer imaging/deployments**
- Documented all activity in the City's work order system, addressed **over 250 unmatched records between legacy and current tracking systems** through *AssetTiger* for the **Asset Inventory Reconciliation Project**, and triaged phishing reports via *Darktrace* integration, **maintaining strict data confidentiality** per City cybersecurity training and **FBI CJIS security awareness certification**

IT Operations Support and Test & Repair Technician Volunteer *NWTI and Free Geek, Fayetteville, AR* | January 2025 – February 2026

- Completed **24+ hours of IT service transitions** for troubleshooting IoT devices to ensure reliability, relocating equipment across departments, managing inventory, (ceiling run) cabling installations, and **deploying a configured Annke IP surveillance system**
- Tested, refurbished, and **processed donated electronics for e-waste or community resale** to help keep tech out of landfills
- Open house tour guiding for *AR Public High Schools* and *NWABuild's Career & Industry Showcase Day*, **in-booth presenting**

B2B Medtech Healthcare Marketing & Photography Intern *Hidalga Technologies, Inc., Springdale, AR* | March – April 2026

- **Architected 1 year of marketing operations infrastructure within 1 month** across *Microsoft Planner*, *Loomly*, *Canva*, and *HubSpot* to position an **NSF SBIR-funded (350K+ secured)** FHIR-based prior-authorization oncology AI startup as a revenue thought leader
- **Authored a 15-section consolidated marketing operations manual** synthesizing **100+ internal sources** into a unified reference system with brand foundation, ICP personas with *LinkedIn Sales Navigator* targeting filters, Cannonball GTM strategy, PAPSI Business Model Canvas, channel playbooks, newsletter operating system, verified-citation copy library, and workflow SOPs
- Built a **365-day multi-platform social content calendar** of **100+ HIPAA-compliant publication posts** across *LinkedIn*, *Instagram*, *Twitter*, *Facebook*, and their online blog, with automation infrastructure mapped to ICP segments, content pillars, and cadences
- Designed a **conversion experiment framework** for the optimization service testing technical-buyer hooks and statistics against baseline engagement rates, and tracked web presence KPIs of impressions and clicks through *OpenAI's ChatGPT Enterprise*
- Delivered **sustainable low-cost operations** through **automation handover of the research repository**, template library, and local LLM workflow improving revenue cycle management, while **capturing event photography** and contributing to IDS problem-solving

Business Development Representative & Intern *Ordinal, Onward HQ, Bentonville, AR* | November 2025 – March 2026

- Drove **municipal sales outreach** for a seed-stage GovTech AI platform, conducting **high-volume 50+ daily cold calls** to **over 2,000 city and county departments** like planning, zoning, IT, and economic-development in the East Coast using *HubSpot* and *JustCall*
- **Built a \$50,000+ deal pipeline** and generated qualified demo interest through targeted voicemails, referrals, and *Gmail* follow-ups
- Refined **cold-calling, AI-education scripts, and live account-executive demos** via *Slack* coordination and *Slab* documentation to incorporate sales best practices, *Loom* recorded tutorials, managed bookings, and founder feedback through their platform
- **Mentored incoming interns** and contributed process and marketing ideas at all-hands meetings while networking at *Onward*

EDUCATION

Technical Diploma in Information Systems

Northwest Technical Institute (NWTI), Springdale, AR | June 2025

- Certifications from **CompTIA+ TestOut** in PC Pro and Networking Competency, along with Ed2Go Online **PMI PMP** Preparation
- **Was awarded the NWTI Presidential Scholar Award**, NWTI Tuition Waiver Scholarship, and ARFuture Grants
- Networking tools of **Kali Linux** (Wireshark/Zenmap), tcpdump, Zabbix, Advanced IP Scanner, Nagios Core, Snort, Nessus, pfSense, Sucircata, Icinga, OpenVAS, LibreNMS, OPNsense, OpenWrt, PuTTY, **RJ-45 continuity map testing**, Rufus, and Gpg4win

Bachelor of Science Diploma in Information Technology

Western Governors University (WGU), Online | Expected May 2028

- Data coursework and industry certifications, including CompTIA, Amazon AWS, **ITIL 4 Foundation**, LPI Linux Essentials, and others (**Microsoft Azure**, **CCNA**, Salesforce, **ServiceNow**, SAP, Databricks, Snowflake, **z/OS**, Canva, Tableau, SAS, and Meta)
- Pursued *LiveBetterU* Coursera professional certifications in **Generative AI Engineering** (RAG & Agentic), Applied **DevOps**, **Cloud Architecture**, Machine Learning, Product Management, **Business Intelligence**, Cybersecurity, **Relational Database Administration**, and related technical systems from **IBM (z/OS)**, AWS, Microsoft, Google Cloud, DeepLearning.AI, ISC2, and SAP while Overnight Retail Stocking & Unloading Team Associate for Walmart, Supercenter #1, Rogers, AR during Spring 2026 semester
- GenAI Project Learning Hub courses for *M365 Copilot Studio Agent*, ChatGPT-5 (*OpenAI Academy*), Gemini (*Google Skills*), Spark Kit, Internal Associate Innovations, Global Tech Academy, and **Harvard ManageMentor** for software and corporate functions

Business Administration and Computer Science Bachelor's Programs

University of Arkansas (U of A), Fayetteville, AR | May 2026

- Pursuing **Google AI for Education Accelerator** program certifications in (**Advanced**) **Data Analytics**, Project Management, Business Intelligence, Cybersecurity, IT Support, IT Automation with Python, Digital Marketing & E-commerce, and UX Design
- Pathfinders fundraising, Side Hustle Hub brainstorming, and *Startup Junkie* **IdeaJam** pitching at *McMillon Innovation Studio*
- **Conceptualized and coded business ventures** in the Office of Entrepreneurship and Innovation, like Flock, a blockchain-powered, decentralized fintech exchange for tokenized multi-investment vehicles; Biotank, a smart app-integrated home biofuel tank processor for home DIY waste-to-fuel blending; DiamondDrive, a peer-to-peer, verified-student network for cost-shared rideshare and item delivery; and Winnow, a client-side, zero-dependency web app for swipe-based social network triage and ranking
- *Ozark Scholars Venture Capital* **student investment ecosystem** involving deal analysis, **sourcing high-potential startups**, bridging academia with real-world markets, industry professional mentorship, and **applying VC, PE, and economic principles**
- **Awarded Student Honors** by the *College of Engineering*, while serving as the **Vice President of Event Management** for the *Association for Information Systems (AIS)* and **Treasurer** for *The National Society of Collegiate Scholars (NSCS)*
- Involvement with *HogSync* Registered Student Organizations, including the *Association for Computing Machinery* and *CyberHogs Security* for **Annual Hackathons** and the *AI Club's* first **Integration & Innovation Challenge**

SKILLS

Programming

Main Coding Languages | *CSS(3)*, *JavaScript*, *HTML(5)*, *Python*, *Java*, *C++*, *SQL*, and *TypeScript*

- Personal portfolio website with **CI/CD pipeline** and **secure admin CMS** (JWT authentication and bcryptjs hashing), post file and source code viewers, financial utilities, and drawing game (Replit, *YAML*, and *Node.js* with Express web framework)
- Terminal coding collective with **DevOps tooling** (Github with Copilot and Marketplace AI, Stack Overflow, **JSON**, **API routing**, Vite, CodeMirror 6, Canvas, Windsurf, and Bolt.new) based on refactored academic projects repository
- **Full-Stack networking parody site** (*JSX*, Tailwind, Vercel, Supabase, PostgreSQL session pooler, API keys, *Next.js*)
- **Developed and published video games** spanning rhythm action (Shuffle Rush, a Frutiger Metro-styled browser title live on itch.io, built with *Rosebud.ai*, *Phaser 3*, *Seedream*, and *Adobe Suite* asset production), satirical arcade golf (SkyDisorder, a **12K+ line, census-verified single-file Canvas 2D build completed across four development phases** by directing a multi-model pipeline of various agents like *Claude*, *GPT*, *Gemini*, and *Grok* with a *Node.js* verification harness on *GitHub*), and a 3D parody fighter (Getting Through in **pre-production** on a scoped stack of *Unity*, *Meshy.ai*, *Nilo.io*, *Roblox Studio*, *Godot 4*, *Photon Fusion*, and *Firebase* / *Supabase* **targeting cross-platform release** via *itch.io* and *Roblox*)
- NWAero regional weather and traffic dashboard with **applied real-time API aggregation** (*Cursor* and *Netlify*)

Financial Portfolio

Self-Directed Valuation Analysis | Bank/Fintech Accounts, *Pitchbook*, *Market Chameleon*, *Tikr*, and *X.com*

- **Allocated aggressive and diversified \$50K+ investments** across domestic/international equities, ETFs, markets, mutual funds, 401(k) contributions, cryptocurrencies (*Kraken* and *Beefy*), and **alternative assets** (*Fundrise*, *Masterworks*, *Rally*, *Arrived Homes*, etc.) through research, screening, trend analysis, sector insights, and **evaluated disciplined reinvestment growth strategies**
- **Assisted family real estate operations for 15+ years**, handling property maintenance, tenant tours and services, and sales
- Conducted market surveys and online/in-person research to **secure undervalued properties in high-growth locations through competitive bidding** with projected long-term investment valuation increases (*Redfin*, *Realtor*, *HomeLight*, and *Zillow*)

Microsoft Office and Google Drive

Business Cloud Applications | Word/Docs, PowerPoint/Slides, Excel/Sheets, Access, and Project

- Utilized services for **setting up telecommunication systems**, databases, digital designs, VHDL Modeling, and formal socioeconomic crisis proposal addresses (Northwest Arkansas housing, data lobbying regulations, and penny minting), **ERP system frameworks**, SaaS (software-as-a-service) company planning, and publications relating to world news, literature, and philosophy

PROJECTS

Founder, Software Solution – Keystone

- Solo-architected Keystone, an **over 130K-line local-first AI agent platform** (*Rust, Tauri, React*) across **100+ merged PRs**, letting regulated institutions run autonomous agents on hardware under keys, with **enforced safety bounds, hash-chained audit logging, and compliance coverage across 25 institutional categories**
- **Designed Keystone's MCP-native connector framework and cryptographically signed agent-skills system with governed self-evolution** drafting procedures from task traces, but every skill crossing **human approval gate** and *Sigstore* signing before changes
- **Engineered a tier-detection and universal-adaptation layer running one codebase correctly across hardware classes** from limited edge devices to multi-user institutional servers with deterministic, auditable configuration and graceful capability degradation

Research on Human-Machine Interaction and AI Communication

“Clawmaxxing” / Iron Man Stack | *OpenClaw, NemoClaw, Ollama,*

LM Studio, Tailscale mesh, LUKS encryption, Kiwix, AnythingLLM RAG, C2PA content signing, CapCut Pro, Voicebox, and ComfyUI/Flux

- **Architected a multi-agent autonomous AI ecosystem on consumer hardware**, deploying quantized open-weights local LLMs on a dedicated *Ubuntu* mini-PC to power specialist agents running cron-scheduled division job workloads across content creation, security operations, software development, investing, and marketing, **proving the viability of local-first AI infrastructure** as an alternative to cloud-dependent corporate platforms like *Anthropic's Claude* and its app connectors, APIs, and MPAs
- **Prototyped data-private, offline accessible AI integration across a fleet of heterogeneous edge devices** connected to a central LLM hub for first-person vision, autonomous navigation, natural-language control, and physical presence for a budget DIY *Sun Founder PiDog V2* quadruped, a custom *Holybro X650* drone (*Pixhawk 6X* flight controller, *NVIDIA Jetson Orin NX 16GB* companion compute running a fully onboard quantized LLM, *OAK-D* depth camera), *Meta Ray-Ban Wayfarer Gen 2* smart glasses relaying a live first-person feed to local vision models, and a *Looking Glass Factory* desk hologram driving a lip-synced embodied avatar
- **Federated the host with Kali Linux cybersecurity laptop over Tailscale**, equipped with a *Hak5 Bash Bunny Mark II* for HID/payload injection, a *Flipper Zero* for RF and hardware probing, an *Alfa AWUS036ACM* dual-band high-gain antenna for Wi-Fi audits, and *YubiKey 5C NFC* for hardware MFA, **bridged into the agent framework** via *mcp-kali-server* for AI-assisted security workflows
- **Engineered an offline knowledge-retrieval layer** serving full *Wikipedia* ZIM archives through *Kiwix* and indexing them via *Anything LLM*, giving every agent cited encyclopedic context at inference time with no internet dependency and the same RAG architecture **portable to securely wiped second-hand drives** (*hdparm* ATA Secure Erased SSDs, *ShredOS* HDDs) repurposed as knowledge bases
- **Grounded the technical work in active research** on communication theory and human-machine interaction, examining design tradeoffs between embodied agents, voice interfaces, ambient AI presence, and online/offline data retrieval
- **Foundational hands-on robotics** background from *Nerdies Fayetteville* program (custom drone assembly, programming, soldering, and flight testing) and competitive local extracurricular *Lego Mindstorms* battle-bot tournaments growing up

Comparative Analysis of DePIN (Decentralized Physical Infrastructure Network) Hardware, Crypto Mining, and Agentic Trading or Lending

Services | *OpenClaw, Octaspace, Render, Aethir, CureCoin,*

Folding@Home, BOINC, Gridcoin, Ebay, Newegg, WhatToMine

- **Authored a 64-page IEEE-formatted scholarly** with NPV, IRR, and Monte Carlo financial modeling to demonstrate the ROI stability, hardware longevity, workload flexibility, and **2-3x resale retention of upgradable multi-GPU systems** on *DePIN* platforms and residential AI hosting over dedicated *ASIC (Application-Specific Integrated Circuit)* miners (*Bitmain* or *Iciver*)
- Highlighted *DePIN's* ethical and societal advantages, including **AI/ML compute renting** and **humanitarian contributions** such as biological research, geospatial/climate modeling, and protein folding with *PoW (Proof-of-Work)* or *PoA (Proof-of-Authority)* mechanisms to **minimize environmental waste, price volatility, and overall depreciation** against hashing (*ASIC Miner Value*)
- Recognize that agentic AI (*harness* with automated hedge/high-frequency) trading frameworks can generate hardware-based, *short-term alpha* passively, but **achieve optimal risk-adjusted returns when layered on DePIN-capable mini-PCs**

LEADERSHIP

“Netfusion - Pizza Planet” IS Implementation Team Project

IT Project Management, NWTI | March – June 2025

- **Led an end-to-end IT upgrade** for a simulated business with my group, **producing deliverables** of key collaborative documentation and a final report with a **capstone presentation** exploring various project management concepts and corporate solutions

SOHO Network Cybersecurity Software Partner Project

Help Desk Tech Ethics & Communication, NWTI | March – May 2025

- Collaborated with a teammate to **research zero-trust AI-driven security platforms**, deployed a free antivirus program after a denied cloud solution demo, and **built a secure SOHO network** for a fictitious company on the subnet for scalability
- **Configured Windows Server roles** such as *DHCP, Hyper-V, AD DS (Active Directory Domain Services), Drive Map*, and others
- Joined *openSUSE* Linux server with *KDE Plasma* to the domain, secured switch ports of *Netgear*, and **used Cisco router's CLI**
- Resolved connectivity and service issues, **physical/logical diagramming**, and enforced multi-departmental user hierarchies
